

# ClickView Access Manager

Securing the contents of your  
ClickView Library Server.

The ClickView Access Manager is a security add-on to the ClickView software. It allows schools to take advantage of their existing LDAP user account management system to control access to the contents of their ClickView Library Server, based on user privileges.

Schools can hide any item on their ClickView Library Server including subject folders, lessons, videos, audio files, images and learning objects. They can even restrict access to a specific chapter of video.

The ClickView Access Manager also allows schools to add a second level of security to the contents of their ClickView Library Server, by restricting access to videos based on their audience classification.

The ClickView Access Manager is ideal for K-12 schools looking to run both the Primary and Secondary libraries from the same server, which means a large saving on hardware and administration costs.

## Pricing

A\$995.00 (ex. GST) once-off software purchase

## System Requirements

- ClickView Library Server 1.5
- LDAP compliant network server
